

[Chaco Period] Terena

they built temporary shelters of brushwood. During this period, fish moved close to the banks and into shallow pools to feed and could thus be caught with greater ease. A very common way of catching fish consisted in a number of men entering the water in order to drive the fish into a corner from where they could be caught by hand and thrown ashore. In shallow water the Terena also used conical wicker baskets open at the top and bottom. These baskets, which were about 2.5 feet high, were dropped over the fish, the fish being extracted through the top by hand. Larger wickerwork fish traps were also used. The Terena claim not to have used nets. Fishhooks made from bone were used in deeper water. For catching large fish swimming on the surface of the water, the Terena used the bow and arrow. Among the commonest varieties of fish the Terena mention the following: "marobás," *chaca-chaca*; "iraíras," *hi-mon*; "bagres," *ayaporé*. Fish were either boiled, broiled, or baked wrapped in clay. For broiling, the fish was cleaned, split, and placed in a cleft stick with cross sticks to keep the fish spread out. The stick was then stuck into the ground near a fire and turned until the fish was broiled. Fish were also dried on a latticework frame over a fire.

The principal weapons of the chase were the bow and arrow, the spear, and the wooden club. The Terena used a bow about 5 feet in length and oval in cross section made from a reddish-color wood, the string being made of tucum palm fiber. For game, bone-pointed arrows with two feathers were used. For birds, arrows with several slender bamboo points were used. Arrows used for shooting fish did not have feathers. In using stones, with which to kill birds, the Terena put two strings on their bows. Formerly the spear was pointed with bone, but with the introduction of iron an iron point was used. A heavy flat wooden blade or club was also used for dispatching wounded game. In addition to these weapons, the Terena used pitfalls and numerous kinds of traps.

When game was scarce and spread over a wide area, men on foot went out individually stalking deer, peccary, rhea, and tapir. If game was more plentiful and the country suitable, game could be surrounded and driven into an enclosed area where they could be shot down or speared. This method of collective hunting was particularly common after the adoption of the horse. Jaguars were sur-
